

Tennessee Drought Update

For the assessment period ending June 20, 2023

This Week's Drought Monitor of Tennessee Map

From the US Drought Monitor, authored by Adam Hartman, NOAA/NWS/NCEP/CPC with input from the Tennessee Climate Office

With little rain in Middle Tennessee, drought conditions have worsened over the last drought monitoring period (Tuesday to Tuesday).

With rainfall amounts increasing in southwest Tennessee, we see a class 1 improvement occurring.

Statewide Condition Summary

What's Changed? With little to no rain in the state over the last drought monitoring period (Tuesday to Tuesday), conditions across the state have worsened including new Abnormally dry (D0) conditions in Middle Tennessee and Moderate Drought (D1) in northern Tennessee bordering Kentucky.

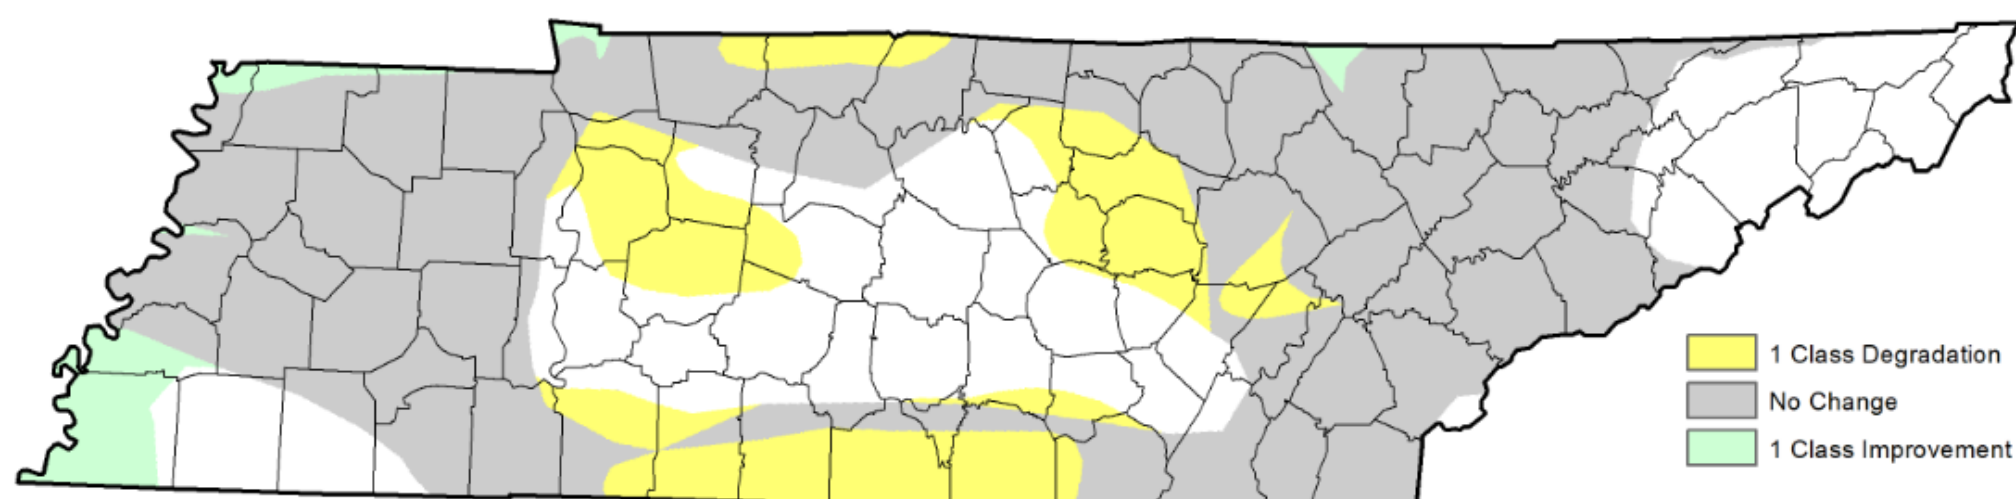

What's New? With a surplus of rain in Southwest Tennessee we see a 1 class improvement in Shelby County. Little to no rainfall in Middle Tennessee contributed to 1 class degradations across Middle Tennessee.

What's Next? With rain in the forecast for this week's drought monitoring period (Tuesday to Tuesday), the possibility exist for both 1 class improvements and degradations across the state.

Statewide Coverage By Category

Category	Coverage This Week	Change Since Last Week
