

Tennessee Drought Update

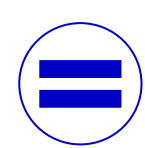

For the assessment period ending June 11th, 2024

Statewide Condition Summary

This Week's Drought Monitor of Tennessee Map

From the US Drought Monitor, authored by Richard Tinker, NOAA/NWS/NCEP/CPC with input from the Tennessee Climate Office

 Rainfall totals have maintained normal conditions

What's Changed? Regular rainfall over the past week has kept Tennessee from seeing the return of dry conditions. Soil moisture percentages and streamflow rates are normal again this week.

What's New? No change in conditions this week.

What's Next? Over the next 7 days, forecasts are predicting very little rainfall across Tennessee. Some areas of West and East Tennessee may see totals of 0.1 inches. This lack of precipitation may lead to dry conditions, especially across the central portion of the state.
