

Dear Future AP Biology Student,

My advice to you within this class is to ultimately be prepared on learning multiple topics and concepts. In order to be successful and prepared for this course, you can start by completing your assigned reading of the chapters given, and utilize the helpful materials that are given to you. By doing this, you will be able to understand what Mr. Tadlock is teaching and covering, but also ask questions on concepts that you do not understand or find difficult. Another piece of advice I would give you is to thoroughly complete your learning objectives, and give as much detail on those answers as possible. Answering these questions thoroughly will help strengthen your confidence in your knowledge on the material you are learning or reviewing. Finally, the last piece of advice I would give you is to practice free-response questions throughout the year and on your own, as these questions play a big role in your grade on the AP exam at the end of the year, but also on tests given by Mr. Tadlock. The free-response questions can either tremendously help your grade if done correctly, or hurt your grade if done incorrectly. Congratulations on beginning a challenging and rewarding course, I wish you all the best!

- Sincerely,

Former AP Bio Student
